

2 x 12 (25mm) drawer units shown stacked

Available in these RAL Colours

Rear curl on drawers

We have been supplying these conservation quality cabinets for a number of years to Libraries, Museums and Archives who require archival quality storage, for larger papers, textiles, charts, maps, posters and drawings.

Our **Rollerglide drawer system** is only available with 50mm deep drawers, steel rollers give optimum smooth drawer operation.

The **Sureglide range** is available in 25mm, the shallow drawer is especially useful when only a small amount of rare paper or single textile are placed in one drawer.

Retaining channel at back of each drawer prevents charts, maps etc from curling upwards avoiding damage when opening drawers.

- Draw load up to 30Kg for 25mm or 40Kg for 50mm.
- High quality all-steel construction
- Index card holder for easy referencing.
- Cabinets can be stacked on top of each other.
- Colours can be mix and match for panels, frame and drawers. Available in light grey, dark grey, mid grey, white, beige, brown, blue and red. *Please note: mid grey will be delivered if colour is not specified on the purchase order.*

Paintwork is conservation quality powder coated which does not off gas making the cabinet archivally safe.
